Subject: RE: Post on St. John's FB (request for Anchor staff support)

A letter to the St. Johns editor was submitted with info on the meeting. Meeting was announced and invitations distributed during CAG meeting last night, additional invites will be distributed St. John stores/library.

Three new citizens attended CAG meeting last night along with regular members. There was time left on agenda and the following questions were asked and may come up next week (Kristine responded to most):

- Why was CDF designed for 100 year floor rather than 500year?
- Sand underneath CDF will liquefy during earthquake
- Will CDF accept waste from other sites beyond Portland H?
- How long with CDF be left open before capped?
- *Silver Valley, Idaho CDF failure*
- Will the material leach?
- Where does the highly contaminated material that won't be acceptable for CDF go?
- What are restrictions for materials to be accepted into CDF?
- Will air monitoring be required to measure volatilization while CDF is open and being filled? Constant monitoring? What happens if EPA finds that volatilization occurring?
- Have we considered other locations for CDF? Areas less populated
- T4 is a last deep water habitat area for sturgeon in the Harbor, CDF will destroy that. Discussion on mitigation vs restoration. Mitigation may not occur in PH for sturgeon if CDF used.
- Did T4 used to be a creek channel?

Alanna,

Confirming that August 20 at 9am works for a coordination call. Also, Todd and Stu will be available for the informational session on August 22.

Thanks for setting this up. Please let me know if you need a call-in number. I would like Todd and Stu to be on the call as well.

Regards,
Kelly
